

# Compliance Management System

## Take a practical approach to your safety

Our **Compliance Management System (CMS)** is a Safety Program designed to make your workplace safer and compliant with OSHA and other regulatory agencies.

Many large companies can afford a large safety and compliance department, while other companies assign these duties to operations or support staff. Some business owners can't justify the expense of a full-time safety person, but still need help with recordkeeping, training and other OSHA requirements.

Whether you want to update your existing program, or create a new one, our CMS Safety Program is your best option.

Average cost of our CMS Safety Program is 5-10% of a full-time safety person.

*Outsourcing the expertise you need can provide a better return on investment, and the "peace of mind" that you are both compliant and minimizing risk exposure.*

## ACS "First Call Free" Service

Your free initial call gives you access to subject matter experts in a variety of fields. Get answers to your legal, insurance, technical and regulatory compliance questions. Contact your ACS Account Manager to get connected to one of our vetted partners.

## Your outsourced safety department

- Reduce the frequency and severity of workplace accidents
- Lower your Worker's Comp insurance rates by 20-30% over time
- Reduce lost workdays and avoid OSHA fines
- Increase productivity
- Protect your work force from needless accidents and injuries

## A comprehensive safety program

- Initial Safety Survey
- Safety Inspections
- Employee Training
- Develop and Update Written Safety Plans
- Online Recordkeeping
- OSHA Consultation & Support
- Other Support Services

## The CMS 5-step approach to safety

### 1) Identify risks and exposures

- Mock OSHA inspection of your workplace, measure your current state of compliance
- Assess your personal protective equipment for employees
- Create a confidential compliance profile with action items

### 2) Create compliant safety plans and procedures

- Safety and health
- Hazard communication
- Emergency action and fire prevention
- Lockout/tagout
- Respiratory protection

### 3) Train your staff

- In-person and online training in a wide variety of key topics

### 4) Implement, monitor, maintain

- Periodic compliance visits
- Compliance records review
- Technical support
- Alerts for Regulatory compliance updates

### 5) Recordkeeping

- OSHA documentation
- Safety Data Sheets
- Hazardous substance list
- Training records
- Emergency response
- Permits and reports

## Key Training Topics Include:

- New Hire/General Safety Awareness
- Emergency Action & Fire Safety/Extinguisher Use
- Hazard Communication/Right-to-Know
- Personal Protective Equipment
- Respiratory Protection & Fit Testing
- Hearing Conservation
- Bloodborne Pathogens Exposure Control
- Lockout/Tagout (Authorized & Affected)
- Electrical Safety Awareness
- Forklift Operator Safety
- Back Safety & Proper Lifting Techniques
- Safety Committee
- Walking-Working Surfaces/Ladder Safety
- First Aid/CPR
