OSHA-Required Safety Training

Safety training isn't just a good idea-IT'S THE LAW!

The Occupational Safety and Health Administration (OSHA) requires employers to train their workers on a multitude of safety and health topics depending upon the nature of the work environment and work activities. Regularly training employees can help minimize the frequency of injuries in the workplace, decrease Workers Compensation premiums, improve employee morale and retention, avoid costly OSHA Fines, all while changing the overall safety culture.

ACS offers training services in order to comply with OSHA's regulatory requirements. We can assist with the identification, preparation, and presentation of the required safety and health training as tailored to your company's particular needs. With the help of ACS, you'll be confident that your employees are equipped with the training necessary to work safely and that your company is compliant with OSHA training requirements.

Our experienced staff of OSHA professionals are ready to assist you with all your safety training needs. Common topics include, but are not limited to:

- Emergency Action Training
- Fire Safety/Extinguisher Training
- Hazard Communication Training
- Lockout/Tagout Training
- Bloodborne Pathogen Training
- Personal Protective Equipment Training
- Respiratory Protection Training
- Hearing Conservation Training
- Walking-Working Surfaces Training
- Basic Electrical Safety Training
- Proper Lifting/Back Safety Training
- Workplace Violence Training
- Safety Committee Training
- And many more!
